

— standard init (timm trunc-normal, std 0.02) — final top-1 78.1%
— early blocks 0-8: weight scales set to the reference network's (block 0 amplified $\times 4$, blocks 1-8 attenuated) — final top-1 79.9%
— late blocks 9-11: write matrices (v, proj, fc2) scaled so that $\|f(x)\|/\|x\| = 1.4$ for both sublayers — final top-1 79.7%
— late blocks 9-11: write matrices scaled to the reference network's $\|f(x)\|/\|x\|$ — final top-1 80.0%
