

— standard init
 — final top-1 78.1%
 — early-block attenuation (blocks 0-8)
 — final top-1 79.9%
 — late-block amplification $\times 1.4$ (blocks 9-11)
 — final top-1 79.7%
 — late-block amplification, reference-matched (blocks 9-11)
 — final top-1 80.0%

(a) Residual-write ratio at initialisation

(b) Class decodability per block, epoch 289

(c) Probe accuracy during training

(d) Residual-write ratio at epoch 289
